OBJECTIVE:

As a highly skilled experienced web developer and software developer, I am dedicated to delivering innovative and scalable web and software solutions that drive business success. With expertise in web and software development, AI integration, and cloud computing, I have a proven track record of leading complex projects from conception to execution. My focus on continuous learning and applying cutting-edge technologies positions me to contribute effectively to a dynamic team, leveraging my technical skills and problem-solving abilities to create impactful software solutions.

SKILLS	PROFESSIONAL EXPERIENCE
• Programming: ○ JavaScript ○ TypeScript ○ HTML ○ CSS ○ SCSS • Frameworks and Tools ○ React.js ○ Node.js ○ MUI ○ Next.js • Graphic Design & Illustrations ○ TiZK/PGF (LaTeX) ○ Figma ○ Adobe ○ D3.js ○ SVG • Design: System architecture • Problem-Solving: Analytical skills • Version Control: Git • Databases: SQL, NoSQL • Agile: Scrum • Testing: QA frameworks	SOFTWARE DEVELOPER(Intern) – MuseTec Innovations (Jun., - Dec.,)2024 Limited • Develop and deploy software solutions for various projects. • Write efficient, maintainable code using modern languages and frameworks. • Collaborate with design and development teams. • Develop and deploy software solutions with JavaScript, React.js, and D3.js, ensuring efficient, maintainable code. • Provide technical support, including troubleshooting and debugging. • Conduct code reviews and ensure adherence to best practices. • Maintain comprehensive documentation for code and processes. • Participate in Agile development, including sprint planning. • Stay updated on industry trends and suggest improvements. • Create visualizations using D3.js, SVG, and TJKZ/PGF for both interactive and static graphics FRONT-END DEVELOPER (REACT) intern– Prodigy Jan., 2024 – Jul., 2024 Infotech • Develop and deploy react-based web applications. • Write clean, efficient, and maintainable code. • Collaborate with UI/UX designers and project managers. • Provide technical support and debugging. • Generate interactive and static visualizations using D3.js, SVG, and TikZ/PGF (LaTeX) to represent data graphically. • Participate in code reviews and ensure coding standards. • Design and implement software solutions using JavaScript, React.js, and D3.js, ensuring high performance and maintainability. • Maintain documentation for code and processes.

• Cloud: AWS, Azure	• Engage in Agile development, including sprint planning.
• Communications	• Stay updated with React advancements and recommend improvements.
• Attention to Details	
IT TECHNICAL SUPPORT – ICT Fountain University Osogbo	
01/24 – 11/24	
	• Troubleshoot hardware/software issues to minimize downtime.
	• Perform system maintenance and updates for optimal performance.
	• Manage network connectivity and implement security protocols.
	• Design and implement software solutions using JavaScript, React.js, and D3.js, ensuring high performance and maintainability.
	• Provide technical support and training to faculty and students on digital tools

INTERESTS

• AI & ML: Integration in Software	• Define software requirements to meet project goals.
• Cybersecurity: Security practices	• Design scalable software architectures.
• Cloud Computing: Scalability	• Validate and verify software for performance.
• Open-Source: Collaboration	• Develop back-end using LAMP stack, including Linux, Apache, PHP, and MySQL.
• Software Development	• Create e-commerce sites with PayPal and Authorize.net integration.
• Scalability: Adaptable solution	• Provide SME leadership on hosting and server maintenance.
	• Implement C# class library for SQL Server access.
VIRTUAL ASSISTANT - Datanetstracon ICT	
1/20 – 2/22	
	• Coordinated software requirements, managed project schedules, provided backend development support, handled e-commerce payment integrations, and delivered technical and clerical support.
	• Supported faculty and senior management, managed calendars and meetings, coordinated virtual events, handled inquiries, and processed financial documents.
	• Provided technical support, conducted research, facilitated communication, managed schedules, and performed system maintenance.
	• Offered high-level administrative support, coordinated projects managed travel and correspondence, and supported library patrons with technical issues.

EDUCATIONAL BACKGROUND

MSc Computer Science (in view) – Fountain University Osogbo **2023 - 2025**

I am pursuing an MSc in Computer Science focusing on Software Engineering, specializing in software architecture, agile methodologies, and advanced development techniques. My research in AI, machine learning, and cloud computing drives innovation, while hands-on experience with modern tools sharpens my ability to manage and develop complex software systems.

LANGUAGE	BSc Computer Science & IT (First Class) - Federal University Dutsin-Ma 2018 - 2023
- Yoruba - English language - Hausa	I graduated with First Class honors in Computer Science & IT from Federal University Dutsin-Ma, where I gained deep expertise in algorithms, data structures, operating systems, and networks. I mastered Java, Python, and C++ through projects that addressed real-world challenges and developed database management, cybersecurity, and web development skills. My research and projects on cutting-edge technologies sharpened my analytical and innovative thinking, preparing me to excel in the dynamic tech industry.

CERTIFICATIONS	
Professional Software Engineering Certification – ALX Software Engineering 2022 – 2023	I earned a Software Engineering certification from ALX, gaining full-stack skills in JavaScript, Python, SQL, and frameworks. The hands-on training focused on software design, development, and problem-solving, preparing me for advanced technical roles.
AI-Augmented Professional Development Skills in the Digital Age – ALX AI Career Essentials 05/24 - 07/24	I earned a Professional Software Engineering certification from ALX, where I mastered AI integration and digital skills enhancement and applied AI tools to real-world projects. This training sharpened my expertise in leveraging AI for software development and digital transformation, making me well-equipped to innovate and thrive in a fast-paced, technology-driven environment.
Financial Literacy Certified – Kudimata Nig Ltd 2023	I hold a Financial Literacy certification from Kudimata Nig Ltd, where I developed skills in personal and organizational financial management, investment strategies, and budgeting. This training enhanced my ability to analyze financial data and plan effectively, bolstering my financial acumen and equipping me with essential skills for strategic financial management.
Virtual Assistance - ALX VA 2024	I have expertise in Virtual Assistance, including managing schedules, handling communications, and providing administrative support. My skills encompass organizing tasks efficiently, coordinating meetings, and utilizing digital tools to streamline operations, ensuring effective and responsive support in a virtual environment.
Software Development – Project Power Learn 2024	I specialize in developing and implementing software solutions to enhance learning experiences. Focused on creating robust and scalable applications, applying modern development practices, and leveraging innovative technologies to drive educational advancement and efficiency.

KEY PROJECTS	
Smart Secure Insurance App (ongoing project) Developed a secure and intelligent insurance platform incorporating React.js, Node.js, and AWS, with advanced user authentication and testing using QA frameworks. - View Project	

- **iScholar**

This project is a scholarship web app for students aspiring to study abroad, built with MUI and TypeScript for a modern, responsive front. Powered by AWS Amplify, it ensures secure, scalable backend services with features like authentication and real-time updates. The app streamlines the scholarship process, enabling students to search, apply, and track opportunities easily. [View Project](#)

- **SheNations**

She Nations is a platform web application for women to share experiences, connect, and inspire. Built with MUI, TypeScript, and AWS Amplify, it offers a secure, responsive, and engaging space for storytelling and support. [View App](#)

- **Financial Management Tool**

Created a tool for personal finance management, featuring budgeting, forecasting, and investment analysis. Designed and implemented the tool with Reacts, Firebase databases, and Scrum methodologies for Agile development. [View Project](#)

- **ChatBot for Student**

- This Student Support Chatbot uses machine learning and Google Gemini API to provide personalized assistance. Built with Vanilla JavaScript, it offers real-time support and seamless integration to enhance the student experience. [View App](#)

- **Real Estate Website**

This real estate management app streamlines property management and transactions with a modern, responsive interface built using MUI and TypeScript. Powered by AWS Amplify, it ensures secure data handling, user authentication, and real-time updates, simplifying property searches and tenant management. [View Website](#)

- **Interior Design Studio Website**

Designed and deployed a professional website for an interior design studio. Technologies used: HTML, CSS, and JavaScript. [View Project](#)

- **Weather App**

This weather app, built with Vanilla JavaScript, uses the OpenWeatherMap API to provide real-time weather forecasts for locations worldwide. It allows users to check current conditions, forecasts, and additional details like humidity and wind speed, offering an intuitive and responsive interface for easy access to global weather data [View App](#)

- **Eyes Test Web Application**

This Eye Test web app, built with Vanilla JavaScript, offers interactive vision tests like color, acuity, and focus. It features a lightweight, responsive design for seamless and accessible eye health checks. [View App](#)

- **Chronic Disease Prediction**

Engineered a predictive model using machine learning for early chronic disease detection, enhancing healthcare strategies focusing on problem-solving and data analysis. Utilized Python, SQL, and system architecture design. - [View Project](#)

- **Attendance Management System**

Developed an attendance tracking system to improve efficiency in educational and corporate settings, integrating React.js, Node.js, and SQL databases with QA testing frameworks for reliability. - [View Project](#)

- **Real-Time Fake News Detection**

Implemented a machine learning solution to detect and mitigate misinformation, supporting public health efforts. Designed the system architecture using Python, NoSQL databases, and Git version control for collaborative development - [View Project](#)

- **Car Repair Services Website**

Developed an efficient website for car repair services, focusing on user experience and responsiveness using Next.js and MUI.

[View Project](#)

- **Consumer Sentiment Analysis**

Built a tool using natural language processing (NLP) to analyze and interpret consumer feedback, providing actionable market insights. Leveraged TypeScript, D3.js, and MUI to visualize sentiment trends effectively. - [View Project](#)

- **Human Image Detection System**

Developed a real-time computer vision and machine learning system for accurate image analysis.

Incorporated React.js, Node.js, and SVG graphics to build an intuitive interface, showcasing attention to detail in design.

[View Project](#)

- **Pet Dog Website**

Created a modern website tailored for pet lovers, showcasing interactive features with React.js and CSS. [View Project](#)

- **Light Fashion Website**

Built a sleek and stylish website for a fashion brand using React.js, SVG illustrations, and Figma designs for enhanced aesthetics. [View Project](#)

- **Plumber Service Website**

Delivered a professional website for plumbing services, combining JavaScript, CSS, and Git version control for seamless deployment. - [View Project](#)

ACHIEVEMENTS

- **Enhanced System Performance:** Improved application performance by 20% through optimized coding practices and efficient resource management
- **Successful Project Leadership:** Led the development and deployment of a complex software project, resulting in a 30% increase in client satisfaction and on-time delivery.
- **AI Integration:** Successfully integrated AI algorithms into existing systems, boosting operational efficiency and enabling advanced data analysis capabilities.
- **Reduced Downtime:** Implemented a robust CI/CD pipeline, reducing deployment times by 40% and minimizing system downtime by 30%.
- **Innovative Solutions:** Developed and deployed a predictive model that enhanced decision-making processes, contributing to a 15% increase in business growth.
